

for immediate release

Apollo has manufactured the original AV-1 for over twenty years. It is recognized as one of the most reliable diver propulsion vehicles in the world.

We are proud to add the NEW AV-2 underwater vehicle to our innovative equipment line. Built for serious underwater explorers. The new AV-2 scooter is depth rated to 230' (tested to 300') and can run up to 100 minutes. That's more than double the run time of previous model. Choose between the new increased voltage Lead-Acid battery or for more extensive diving the Nickel Metal Hydrate (Ni-MH). With all that time to burn you can get distracted. The new battery life indicator is a useful feature.

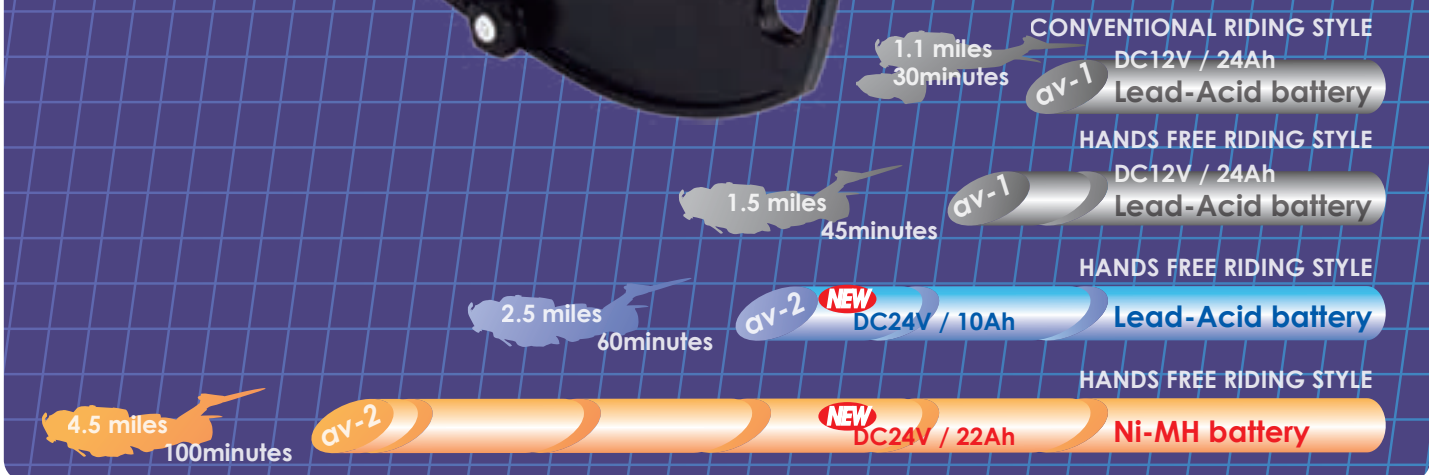

Complete control of speed is now at your finger tips. Travel at up to 2.5 miles per hour. Our new variable speed trigger works with the Hands Free Riding saddle (included) for smooth acceleration from full stop to top speed. Riding hands free gives you freedom to explore new sites and new diving styles. Twist and turn like a dolphin, soar like a manta ray or make use of the tow bars to take along a couple friends and extra gear.

**NEW**

Battery Options  
24V/10Ah Lead Acid  
24V/22Ah Ni-MH

Performance comparison by battery selection
