

## **bio-fin pro** **not all split fins are equal, say the experts.**

Apollo first introduced the bio-fin back in 1998, announced as "the most revolutionary development in diving since the invention of the fin", the new fin was an instant success and even the most skeptical were convinced, after using the bio-fin.

Today the bio-fin is used, all around the world by military, commercial and recreational divers. The enormous advantages the bio fin offers over other fins has become very obvious to all divers/swimmers and even other manufacturers.

But not all split fins are equal! - the original bio-fin has been evolving over the years undergoing design refinements, perfecting manufacturing and materials available. With all the hi-tech materials today Apollo has found Natural Rubber is still the best material for fin construction. Although not the cheapest or easiest way to manufacture fins -natural rubber out performs all other materials and offers the most comfort.

The new bio-fin pro is now available in metallic blue as well as matte black. Endorsed by professional divers and "Tester's Choice" as well as "Best Overall" by Rodale Scuba Diving magazine the bio-fin is the original and still the best.

Contact your local Apollo dealer about the New bio-fin pro - you'll never use another fin again!

- *Natural Rubber Molded - out performs all other materials*
- *Faster Stronger swimming - less effort, more power*
- *Reduce Muscle Fatigue - no more cramps*
- *Increase bottom time - less air consumption*
- *Reduce Silt Up - safer diving*

Apollo's new bio-fin pro are available in a full range of sizes.
