

bio-tank lock just a few quick turns...

Apollo has redefined the standards for scuba diving with products like the award winning bio-fin and now the new apollo bio-tank lock. It can secure a diving tank in seconds with very little effort and up to ten times more tightening torque than any conventional tank lock on the market today.

Apollo employs an advanced adjustable screw system that makes installation and removal a breeze; even with thick gloves. The heavy duty spring automatically adjusts as webbing expands and contracts. It will accommodate any tank size and is adaptable to most BCD's.

Like the bio-fin the apollo bio-tank lock has to be experienced at work to appreciate it's advantages. Having used one you'll wonder how you could ever go back to a conventional tank lock. No more re-threading or struggling with buckles and cams to lock your tank only to find it slipping. With it's ease of use and reliability the bio-tank lock adds confidence, safety and comfort, to every diver.
